

## EASY SLIDER FITTING

After making out the slots in their respective positions, three or four holes are drilled close to each other at one end of the slot. These holes are then joined up by initially using a needle file followed by a flat ward file. The resultant slot should be large enough to accommodate three hacksaw blades side by side as shown on the sketch.

These blades are fixed in a standard hacksaw frame or can be hand held. Using this arrangement, the required width of the slider control slot can be easily cut for any given length, and finishing off with a file.
