;
;   This will demonstrate the simplicity and beauty
;of machine language programming in Parallax Assembly Language.
;This program will count in binary 0-255 and display the value
;in binary code on 8 separate LED's hooked up to Port B (rb.0-rb.7)
;Timing is based on a 4 MHZ ceramic resonator or crystal and will require
;330 ohm current limiting resistors in series with the LED's.

        org      7          ;start file definition at register 7

Hi      ds      1          ; MSB of time.
Lo      ds      1          ; LSB of time.
Mult    ds      1          ; # of time delay cycles
