

ERROR REPORTS

Two errors appeared in the schematic diagram of the "Super Simple Shortwave Receiver" (Popular Electronics, August 1993). First, the positive end of C17 should connect to the junction formed by U2-a pin 1, R12, and R14. Second, C13 should be taken out of the signal path, between D2 and pin 3 of U2-a, and instead be connected between the signal path (at that same point) and ground; the way that it is shown in the schematic diagram grounds the signal path. We are sorry for any inconvenience this might have caused.—Editor
