45V 8A Bench Supply, October 2019: in the circuit diagram (Fig.3) on pages 26 & 27, the 1nF capacitor between pins 1 & 2 of IC1a should be 100nF; D6 is an SB380 type; IC1 should have a 100nF bypass capacitor from its negative supply (pin 4) to ground; the 68Ω resistor below Q3 is a 1W type; the four 0.1Ω resistors are 1W, not 5W; the 100µF capacitor at the input of REG1 has a 63V rating; and if electrolytics are used for the two 1µF capacitors, their negative leads go to ground.
Vintage Radio (Kriesler 31-2), September 2019: the vibrator circuit (Fig.2) shown on page 115 was incorrectly redrawn. The vibrator reed should be shown not touching either of the two contacts.
