SAFETY PRECAUTIONS

NOTE-1

WARNING:

Service should not be attempted by anyone unfamiliar with the necessary precautions for this recorder. The following precautions are necessary during servicing:

1. Many electrical and mechanical parts in this recorder have special safety-related characteristics for providing protection against shock, fire and other hazards. These characteristics often go unnoticed in a visual inspection, and the protection afforded by them cannot necessarily be obtained by using replacement components with higher ratings (voltage, wattage, etc.).
2. Replacement parts having special safety-related characteristics are identified in this manual, and in the schematic diagrams, by the symbol Δ . These components have values that are of special significance to product safety. Should any component (identified by the symbol Δ) need to be replaced, use only the part designated in the Parts List. Do not deviate from the specified resistance, wattage and voltage ratings.
3. Before returning the set to the customer, always perform an AC leakage current check on the exposed metallic parts of the cabinet, such as terminals, screwheads, metal overlays, etc. to be sure that the set is safe to operate without the danger of electrical shock. Plug the AC line cord directly into a 120 VAC outlet (do not use a line isolation transformer during this check.) Use an AC voltmeter with a sensitivity of 5000 ohms per volt (or more) as follows: Connect a 1500 ohm, 10 watt resistor, paralleled by a 0.15 mfd, 150 VAC capacitor, between a known good earth ground (water pipe, conduit, etc.) and the exposed metallic parts, one at a time. Measure the AC voltage across the 1500 ohm resistor and 0.15 mfd capacitor combination. Reverse the AC plug at the AC outlet and repeat the AC voltage measurements for each exposed metallic part. The measured voltage must not exceed 300 mVrms. This corresponds to 200 μ A AC. Any value exceeding this limit constitutes a potential shock hazard and must be corrected immediately.

1. DISASSEMBLY

1-1. REMOVAL OF CABINET, MECHANISM UNIT AND MAIN BOARD

REMOVING THE CABINET PARTS (Fig. 1-1)

1. Remove the cabinet and bottom cover by removing the four screws (A) and five screws (B).
2. Remove the front panel by removing the locks of the clamps (C) using a screwdriver, etc. and slightly rotating the bottom part in the direction of the arrow.

Notes:

- Electrical adjustments for this model can be performed with only the cabinet removed.
- When replacing the bottom cover, do not tighten the screws (B) too much. Excess tightness may damage the screws taps on the chassis.

REMOVING THE MECHANISM MAIN UNIT (Fig. 1-2 and Fig. 1-3)

After removing the cabinet parts:

1. Remove the two screws (D), and then remove the bracket.
2. Remove the 29-wire flat cable from CN811 of the MC-2 PWB.

3. Remove the flat cable from the cylinder assembly, then the two screws (E), and finally the VM-1 PWB assembly. It is not necessary to remove a couple of flat cables connected between the VM-1 PWB assembly and CP-1 PWB assembly.
4. Remove the mechanism main unit by removing the two screws (F) and four screws (G). Remove, as well, the two screws (G) at the cassette tray side by pressing the tray lock lever in the direction of the arrow to remove the lock, and pushing the cassette tray backwards.

REMOVING THE CP-1 PWB ASSEMBLY (Fig. 1-3)

After removing the cabinet parts and mechanism unit:

1. Pull out the TM-1 PWB assembly from CN301 and CN302 while pressing and spreading out the four clamps (H).
2. Remove the two red screws (I). Next, remove the CP-1 PWB assembly by lifting it straight up while pressing and spreading out the two clamps (J).

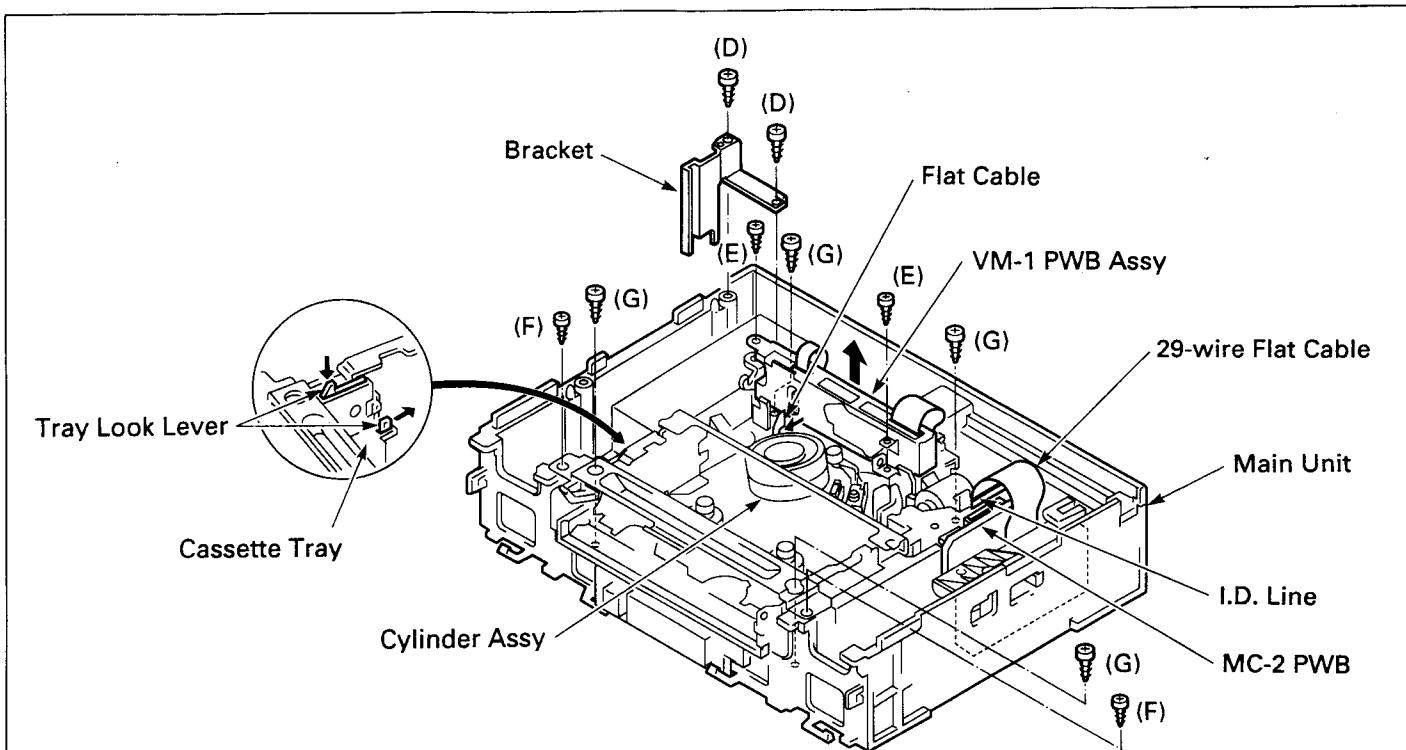

Fig. 1.2

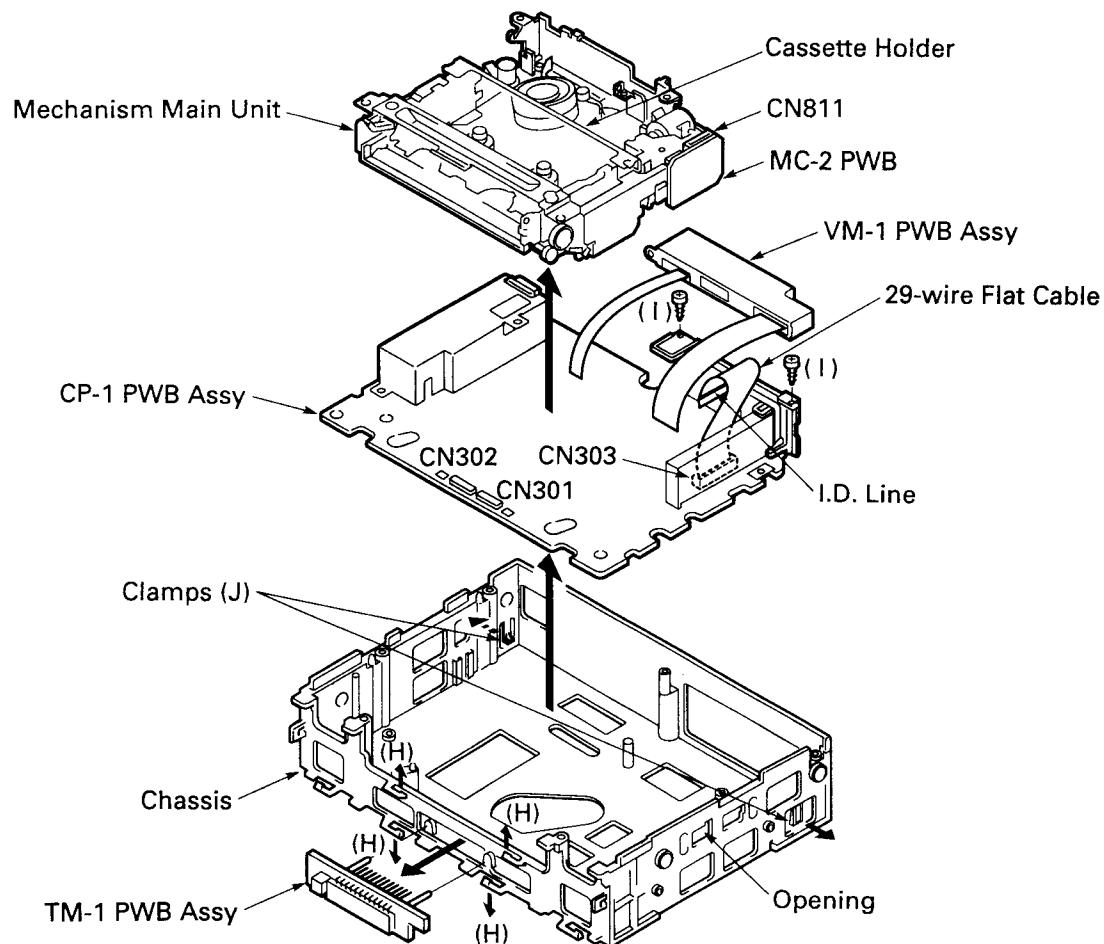

Fig. 1.3

TEMPORARILY SETTING UP AND CONNECTING CP-1 PWB ASSEMBLY (Fig. 1-4)

The following is an example of how to place and connect the main board not requiring a jig, when repairing the CP-1 PWB assembly.

1. Place the mechanism main unit at the fixed position for the chassis. It is not necessary to tighten the screws.
2. Insert the VM-1 PWB assembly at the fixed position of the mechanism unit and connect the flat cable of the cylinder assembly.
3. Connect the 29-wire flat cable to MC-2 PWB, on the mechanism unit. Connect the TM-1 PWB assembly if necessary.
4. Place the CP-1 PWB assembly on top of the mechanism main unit along the cassette holder. Insert the tip (K) of the terminal board into the opening (L) at the side of the chassis, as shown in the enlargement diagram to stabilize the CP-1 PWB assembly.
